

Rule for Program OTP MCU by Factory

1. Data Providing and Samples Approval

When customer orders the OTP type MCU and asks for firmware programming by factory, the customer must fill in Product Information Sheet (P.I.S.) correctly and completely. The customer also has to provide a floppy with Code File or an unprotected OTP IC programmed with the firmware to MDT's sales representative. MDT will program the MCU according to P.I.S and code file. Some samples will be provided to customer for approval before mass production. Before the samples approved, MDT may refuse to program a large number of OTP MCU.

2. Charge for programming

1. MDT will charge customer the programming fee according to the cost from testing house.
2. MDT salespeople will inquire and provide the actual programming fee to customer.

3. Lead-time

The lead-time depends on the IC quantity and the schedule of testing house. Please feel free to contact with our salespeople to inquire the exactly delivery date.

4. The Minimum Quantity

The minimum quantity is 50K ea. It is negotiable for special case. MDT has the right to change the minimum quantity without notice.
